- SQL
- NOSQL

Web Skills

- REST API
- NODEJS
- REACT
- JQUERY
- WORDPRESS
- FLASK
- DJANGO

Others

- LINUX
- AWS
- GITHUB
- JIRA
- TESTING & DEBUGGING

Personal Skills

- Courage To Learn
- Responsible
- Creative
- Great Communicator
- Flexible

Work Experiences

Full Stack Web Developer – UpWork

Oct 2014 - Present

Working as a full stack guy on both long-term and short-term projects with technologies like HTML, CSS, JavaScript, NodeJS, ReactJS, PHP, WordPress, Python, Flask, Django, AWS etc. Have completed more than 60 projects with the 5-star rating.

Frontend Web Developer – Ground.Work

May 2017 – August 2017

I had to redesign the whole dashboard of the website, from sketch design. It's a Python/Flask app and I handled 80% of the Jinja2, HTML, CSS, JavaScript, jQuery, Form validation, Ajax and sometime Testing tasks. We used JIRA, Github for project management and had the chance to work with a pretty solid team.

Junior PHP Developer – SimplyGlobal

Oct 2016 – Jan 2017

Had to develop a fully functional event booking system and food selling shop in raw PHP with both Stripe and PayPal payment integration. A huge dashboard for the users with multiple roles and the ability to print unique tickets, sell tickets, manage coupons and interact with their customers.

Web Developer & Project Manager – PlushTents

August 2015 – Jun 2017

My responsibility was to develop the site from scratch using WordPress and fix the ongoing issue. Later I maintained the site for a whole year, managed AWS server, CDN etc.
